OFFICIAL THEME USER GUIDE

reva

HTML5 - Responsive One Page Parallax Theme

designova™

GREETINGS FROM DESIGNOVA

Thank You For Purchasing Our Product.

Important - FAQ:

1) What is this User Guide for ?

This user manual is under the scope of ordinary users in order to setup their static website using this HTML5 theme. If you are looking for advanced customization please note that you need to familiarize the relevant technologies used to build this theme.

2) How to use this HTML5 theme?

This theme is purely HTML template used to create a static website. This theme is not compatible with WordPress, Weebly or FrontPage systems. If you are looking for WordPress themes please visit our themeforest portfolio and see themes with title as "WordPress".

3) "Stylesheet missing" error. Why?

As we have already mentioned on themeforest page, this is HTML5 template and not a WordPress theme. But if you try to install this theme on any WordPress system then the above stated error occurs. There is nothing can be done about this rather than purchasing a WordPress version (if available) .

4) How to get theme updates and future versions?

We regularly release updates and bug fixes on our themes and we use Twitter to announce it to our customers. Please follow us @designovastudio

5) How to get support on this theme?

This user manual covers everything you need to setup the website. But if you find any bugs, issues and limitations on this theme please contact our support team via email to: info@designova.net. When you send a support request email you must include the purchase code and purchase date of the product (received from Market Place website). Support request emails without these information will not be answered.

6) Support v/s Theme Customization?

When we offer free support, we are always here to help you when bugs and issues are reported on our themes and we will not charge anything for this service as we are committed to give our level best on our premium products.

But this free help does NOT mean to be any free customization or modification of our themes. We are a small team and we are not available for any free customization services at the moment. But if you like you can opt for premium theme customization services, kindly let us know via email to: info@designova.net. If our developers are available we will get back to you with a nice plan and schedule

Theme Information

Being a premium HTML5 template, Reva is a simple and easy to use creative parallax theme with with fully responsive layout built using Bootstrap framework version 2.2. This theme features Single Page Scroll-Down layout with parallax overlay layers and this theme is perfectly responsive responsive and cross-browser compatible. Reva comes with a completely editable layout with the power of Bootstrap framework. This can make it extremely easy for ordinary users to setup their own website. But it is also handy to extend the template to any level as your creative freedom. Template includes w3 valid cross browser compatible HTML5 markup.

Main Features

- **Easy to use Parallax theme with a nice design** - a creative theme best suitable for creative agency / individual portfolios and for innovative business showcase.
- **Perfectly responsive** across all devices including iOS mobile devices, android and windows phone platforms.
- **Built with Bootstrap 2.3.0** – World's best Responsive Front-end Framework. Most easy to use and customize.
- **Parallax Layers + Overlay Content** that produces a stunning scrollable panel visual effect.
- **ISOTOPE** (Premium Plugin Worth USD 15) Powered **Filterable Portfolio** / Gallery with Lightbox.
- **Project Info + Images Slider inside Lightbox via AJAX** – the best way to showcase your project information and images at the same time.
- **Full Screen Image + HTML slider** on home page powered by MaxImage plugin.

- **Milestones Carousel Slider –** a very usable carouFredSel carousel implementation that supports any HTML5 content.
- **Testominal Slider, Pricing Tables etc.**
- Also includes all **UI patterns** from Bootstrap.
- Precisely hand-coded HTML5 template with w3 valid cross-browser compatible markup.
- **Working contact form** with validations and **PHP Email sender**

Our awesome support team is always available to help you on bugs and issues related with our themes.

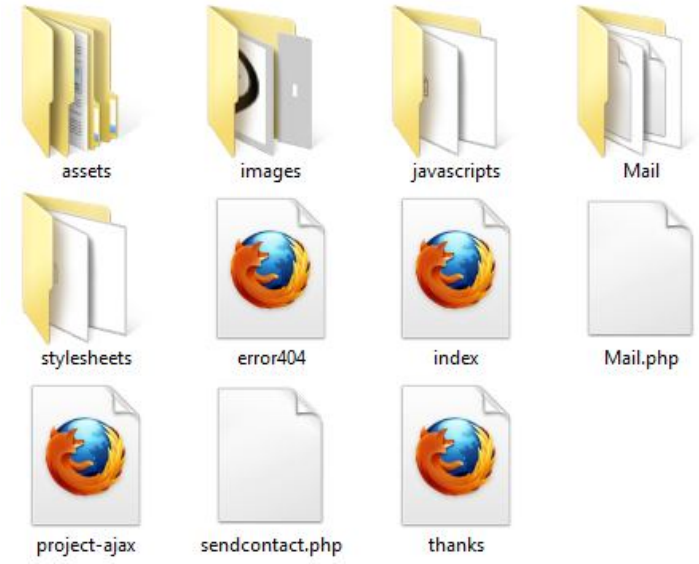
Chapter 2

Files Included

Reva includes a clean and clearly defined file structure so that our users can easily understand the hierarchy of theme assets. This will make it easy to edit the theme and customize it (for experienced users).

Kindly find the directory structure explained with screenshot given below:

Directory Structure



FOLDER / FILE NAME	DESCRIPTION	WHAT TO DO
assets	Contains files for Bootstrap framework along with some re-usable extensions	Just replace the inner files if you need to manually upgrade to a newer version of Bootstrap
images	Contains all image resources used in this theme	Please replace placeholder images with your own images, don't forget to keep exact dimensions and format as original placeholders
javascripts	Contains all JS / jQuery library files used in this theme	Edit / Replace only if you are familiar with JS / jQuery codes
mail	Contains resources for PHP email sender	Please DO NOT modify unless you know exactly what you are doing
stylesheets	Contains all CSS files used within this theme. This includes CSS files specific to plugins and modules used in this theme	Modify only STYLE.CSS for changing the look and feel of theme. If you are unsure about other CSS files please keep them unchanged.
Error404.html	File for "Page Not Found" cases – Error Page	Keep this file exactly on same location as it is. You can change the name if it is required by your web hosting provider.
Index.html	Main web page / home page	Keep this file exactly on same location as it is. DO NOT change the name.
Mail.php	Mail sending PHP module	Keep it on place. DO NOT modify

Sendcontact.php	Email sender configuration PHP script	You have to change some values in this file; this will be explained on following section within this guide.
Project-ajax.html	Web page to show a single project (shown inside lightbox via AJAX only).	Use this as a template to display separate project information. Clone this and build as many pages as your projects are. You have to manually rename and link them from portfolio module. This will be explained on following section within this guide.
Thanks.html	Web page displayed as a response after sending the contact form message via home page.	Feel free to edit the contents. DO NOT change the name of this file.

Chapter

3

Template Layout and UI Framework

Reva is a single page website with scroll-down sections which stands for 'pages' inside this theme. So you have different sections on a one-page, you can easily add/remove sections as needed. Kindly follow the guidelines given below:

1. Template Layout Setup:

Setting Up Navigation:

As a one page template, Reva has navigation which is a collection of "click to scroll" links. We use jQuery to scroll down to various sections (pages) inside the same file (index.html). Please see the markup corresponding to Main Navigation, given below (refer Index.html – Line 121):

```
120     <!-- Navigation-->
121     <nav id="navigation" class="visible-desktop">
122
123
124         <ul id="menu" class="visible-desktop">
125             <li class="links current">
126                 <a id="home-linker" href="#index">Home</a>
127             </li>
128             <li class="links">
129                 <a id="about-linker" href="#about">About</a>
130             </li>
131             <li class="links">
132                 <a id="portfolio-linker" href="#portfolio">Portfolio</a>
133             </li>
134             <li class="links">
135                 <a id="services-linker" href="#services">Services</a>
136             </li>
137             <li class="links">
138                 <a id="milestones-linker" href="#milestones">milestones</a>
139             </li>
140             <li class="links">
141                 <a id="contact-linker" href="#contact">Contact</a>
142             </li>
143         </ul>
144     </nav>
145     <!--/Navigation-->
```

Here the ANCHOR tag (<a>) holds an HREF attribute which contains the target (ID) of the section. When user clicks on this anchor tag, the page will be scrolled down to that section.

```
<a id="about-linker" href="#about">about</a>
```

When clicked on this link, page will be scrolled down to:

```
<section id="about" class="page clearfix">
```

Template Sections Overlay:

There are various sections (similar to pages) in this template, as given below:

Section / Page Name	Identifier on markup	Modules / Plugins used
Intro / Home		Full Screen Slideshow
About	<section id="about" class="container-fluid section page">	
Portfolio	<section id="portfolio" class="container-fluid section page">	Isotope Filterable Portfolio + Colorbox Lightbox with AJAX content + FlexSlider integrated.
Services	<section id="services" class="container-fluid section page">	
Milestones	<section id="milestones" class="container-fluid section page">	Responsive content carousel via carouFredSel
Contact	<section id="contact" class="container-fluid section page">	

Setting up a section / page:

A section / page are a markup region contained within an HTML5 SECTION tag, example as given below:

```
154     <!-- page:starts-->
155     <section id="about" class="container-fluid section page">
156         <div class="row-fluid">
157             <section class="container">
158                 <div class="row">
159                     <article class="span12 text-center main-title">
```

```
254                     </article>
255                 </div>
256
257             </section>
258         </div>
259     </section>
260     <!--page:ends-->
```

We use the above region to wrap up each section and inside this region we build other elements using Bootstrap framework's native arrangements via HTML5 markup. So, you have to understand how to create elements using Bootstrap, please read on.

2. Bootstrap Framework Setup:

Reva is completely built with Bootstrap 2.3.0 responsive framework which is the best front-end development framework available at present. It is very easy to edit the layout as well as for making any advanced customization. Kindly note, you have to familiarize Bootstrap's native arrangements (it is easy) and short codes before you proceed.

Bootstrap's grid system

The default Bootstrap grid system utilizes **12 columns**, making for a 940px wide container without responsive features enabled. With the responsive CSS file added, the grid adapts to be 724px and 1170px wide depending on your viewport. Below 767px viewports, the columns become fluid and stack vertically.

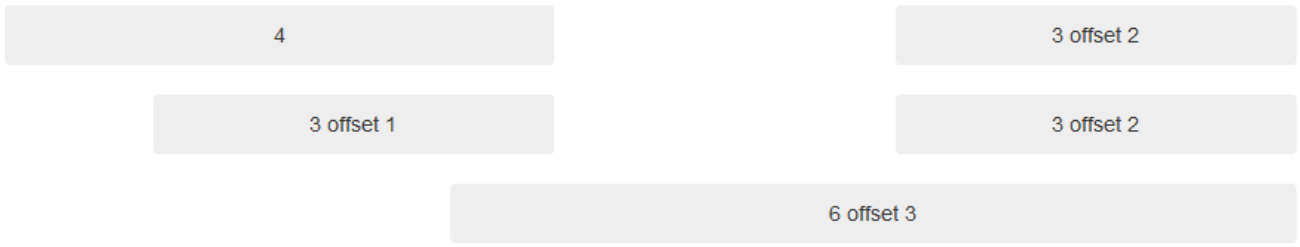
Setting up the grid – HTML

For a simple two column layout, create a .row and add the appropriate number of .span* columns. As this is a 12-column grid, each .span* spans a number of those 12 columns, and should always add up to 12 for each row (or the number of columns in the parent). Please see the markup:

```
1.  <div class="row">
2.    <div class="span4">...</div>
3.    <div class="span8">...</div>
4.  </div>
```

Offsetting columns

Move columns to the right using .offset* classes. Each class increases the left margin of a column by a whole column. For example, .offset4 moves .span4 over four columns.



```
1.  <div class="row">
2.    <div class="span4">...</div>
3.    <div class="span3 offset2">...</div>
4.  </div>
```

We are having page limitation to explain everything about Bootstrap here. So for more information we refer to original documentation for Bootstrap, found here:

http://twitter.github.com/bootstrap/scaffolding.html

Upgrading Bootstrap on Future:

As Web is always changing day by day, we would like to keep our themes expandable and adaptable to innovations. We have kept all assets and files related to Bootstrap framework on a separate folder called ASSETS found on the following location:

[THEME'S ROOT FOLDER]/**assets**

Please replace the following files contained in this 'ASSETS' folder with your new files coming from Bootstrap's download ZIP pack. You can see exactly the same folders there. Replace the inner files exactly as it is.

[THEME'S ROOT FOLDER]/assets/**img**
[THEME'S ROOT FOLDER]/assets/**css**
[THEME'S ROOT FOLDER]/assets/**js**
[THEME'S ROOT FOLDER]/assets/**ico**

Chapter

4

Theme Styling and Skinning

Reva is completely styled majorly with a single CSS file that contains all the style rules for this theme. Please see the following file:
[THEME'S ROOT FOLDER]/stylesheets/**style.css**

Feel free to modify / change the rules stated in this CSS file. You better have a basic understanding of CSS.

Building a new skin variant (optional):

Just clone the entire ROOT FOLDER and go the STYLE.CSS. Now you can see the color specific values (Hex Value) related to each component on the template. For example, in the case of main heading and promo text found in each section (page) such as:

A modern creative theme featuring parallax layers and minimalistic design at it's best. The layout is perfectly responsive across all devices, built with latest Bootstrap 2.3.0

Here the components are:

```
<div class="row">
                    <article class="span12 text-center main-title">
                        <h1>About</h1>
                        <img title="designova" alt="reva"
src="images/legends/star-red.png"/>
                    </article>
                </div>

                <div class="row">
                    <article class="span12 text-center promo-text">
                        <p>A modern creative theme featuring parallax layers
and minimalistic design at it's best. The layout is perfectly responsive
across all devices, built with latest Bootstrap 2.3.0</p>
                    </article>
                </div>
```

And the style rules are:

Style.css: Line 175

```
.main-title
{
     color:#000;
     margin-top:60px;
}

.main-title > h1
{
     font-family:Ostrich_Sans_Black;
     font-size:96px;
     margin-bottom:20px;
}

.promo-text
{
     margin-top:20px;
}

.promo-text > p
{
     color:#aaa;
     font-family:Open_Sans_R;
     font-size:24px;
     font-weight:400;
```

```
      line-height:32px;
}
```

You can also change many other styling parameters such as font style, font size, spacing and alignment etc.

Chapter

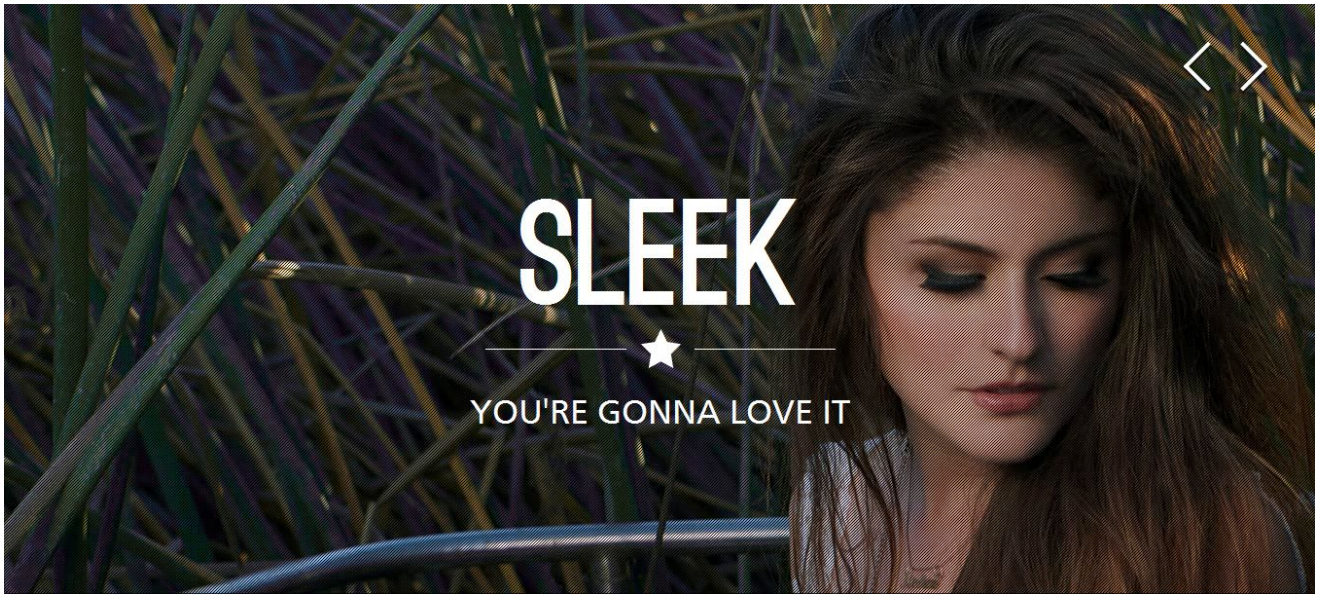
5

Featured Modules and Markup

1) Full Screen Slider on Home Page

We have arranged a full screen slider which showcases various images along with content which you may have to display on your website. In order to make things pretty nice we have kept this inside the home page itself.

This nice module is powered by jQuery MaxImage plugin.



Each slider block is created via DIV elements where the Heading, Image and Paragraphs are contained inside. Please see the source code screenshot given below:

```
67          <!-- Full Screen Slider-->
68          <div id="maximage" class="">
69
70
71              <div>
72                  <img title="designova" alt="reva" src="images/bg/bg1.jpg"    />
73                  <div class="pattern"></div>
74                  <div class="in-slide-content">
75                      <div class="in-slide-inner">
76                          <h1>Reva</h1>
77                          <img title="designova" alt="reva" src="images/legends/star-white.png"/>
78                          <p>Creative Theme</p>
79                      </div>
80                  </div>
81              </div>
82
83
84
85              <div>
86                  <img title="designova" alt="reva" src="images/bg/bg2.jpg"   />
87                  <div class="pattern"></div>
88                  <div class="in-slide-content">
89                      <div class="in-slide-inner">
90                          <h1>Sleek</h1>
91                          <img title="designova" alt="reva" src="images/legends/star-white.png"/>
92                          <p>You're gonna love it</p>
93                      </div>
94                  </div>
95              </div>
```

 holds each image shown on the slider

CLASS=" **in-slide-content**" stands for each content block.

CLASS="PROJECT-LINK" holds the HREF value as target address of the page displayed when user clicks on this project block. In the demo we have kept all project blocks linked to "single_project.html". You can clone this page and rename it as you like, then link to relevant project block.

The slider engine behind this module is jQuery MaxImage. This module is very simple script and we have kept this within a common JS file:

[ROOT FOLDER]/javascripts/**scripts.js**

A script for initialization of this plugin is shown below:

```
/*=========================================================*/
/*  Full screen slider
/*=========================================================*/

$(function(){
            $('#maximage').maximage({
                cycleOptions: {
                    fx: 'fade',
                    speed: 1000,
                    timeout: 4000,
                    prev: '#arrow_left',
                    next: '#arrow_right',
                    pause: 1,

                },
                onFirstImageLoaded: function(){
                    jQuery('#cycle-loader').hide();
                    jQuery('#maximage').slideDown('slow');
                }

            });

            // Helper function to Fill and Center the HTML5 Video
            jQuery('video,object').maximage('maxcover');

            // To show it is dynamic html text
            jQuery('.in-slide-content').delay(1200).slideDown(2000);
        });

```

MaxImage plugin is extremely powerful carousel plugin which has a wide variety of options. You can refer original documentation of the plugin to see more possibilities:

http://www.aaronvanderzwan.com/maximage/2.0/

2) Testimonials Slider

We have a simple but useful testimonials slider. Even if we call it as testimonials slider you can use it to display any HTML5 elements including images and content.

```
                    <!-- Testimonials Carousel-->
            <div class="carousel_testimonials">

                    <!-- Testimonials List-->
                    <ul id="testimonials-carousel">

                        <li>
                            <h1>A perfect theme with easily editable layout. Really appreciate your work.
                            Thank you so much for such a great theme!
                            </h1>
                            <img title="designova" alt="reva" src="images/legends/star-red.png"/>
                            <h5>Orman Rodrigues, OneNetworx LLC.</h5>
                        </li>

                        <li>
                            <h1>A perfect theme with easily editable layout. Really appreciate your work.
                            Thank you so much for such a great theme!
                            </h1>
                            <img title="designova" alt="reva" src="images/legends/star-green.png"/>
                            <h5>Orman Rodrigues, OneNetworx LLC.</h5>
                        </li>
```

jQuery Caroufredsel is used to build this module. This module is very easy to use and we have kept this within a common JS file:

[ROOT FOLDER]/javascripts/**script.js**

A script for initialization of this plugin is shown below:

```
305         $('#testimonials-carousel').carouFredSel({
306             auto: true,
307             prev : {
308                 button      : "#prev",
309                 key         : "left",
310                 items       : 1,
311                 duration    : 750
312                 },
313             next : {
314                 button      : "#next",
315                 key         : "right",
316                 items       : 1,
317                 duration    : 750
318             },
319 
320             mousewheel: false,
321             swipe: {
322                 onMouse: false,
323                 onTouch: true
324             }
325         });
326     });
```

Caroufredsel plugin has more advanced options. You can refer original documentation of the plugin to see more possibilities:

http://caroufredsel.frebsite.nl

3) Milestones Slider

We have easy to use content slider on Inner Pages such as Milestones Page. This slider is alos powered by Caroufredsel plugin and it supports captions via HTML5 content.

```
716                     <!-- milestones Carousel-->
717         <div class="list_carousel">
718
719             <!-- milestones List-->
720             <ul id="milestones-carousel">
721
722                 <li class="milestone-item">
723                     <img title="designova" alt="reva" src="images/milestones/01.png"/>
724                     <h2>534</h2>
725                     <h4>emails</h4>
726                 </li>
727
728                 <li class="milestone-item">
729                     <img title="designova" alt="reva" src="images/milestones/02.png"/>
730                     <h2>019</h2>
731                     <h4>projects</h4>
732                 </li>
733
734                 <li class="milestone-item">
735                     <img title="designova" alt="reva" src="images/milestones/03.png"/>
736                     <h2>727</h2>
737                     <h4>tweets</h4>
738                 </li>
```

The plugin which demonstrated in previous section - jQuery Caroufredsel - is used to build this module also. This module is very easy to use and we have kept this within a common JS file:

[ROOT FOLDER]/javascripts/**script.js**

A script for initialization of this plugin is shown below:

```
305             $('#testimonials-carousel').carouFredSel({
306                 auto: true,
307                 prev : {
308                     button      : "#prev",
309                     key         : "left",
310                     items       : 1,
311                     duration    : 750
312                     },
313                 next : {
314                     button      : "#next",
315                     key         : "right",
316                     items       : 1,
317                     duration    : 750
318                 },
319
320                 mousewheel: false,
321                 swipe: {
322                     onMouse: false,
323                     onTouch: true
324                 }
325             });
326         });
```

Caroufredsel plugin has more advanced options. You can refer original documentation of the plugin to see more possibilities:

http://caroufredsel.frebsite.nl

4) Filterable Portfolio / Gallery (ISOTOPE) with Lightbox

We have a stunning and premium portfolio module within this theme which is powered by an amazing jQuery plugin known as ISOTOPE. This is a premium plugin worth USD 15.

This filterable portfolio / gallery section includes a stunning filterable animated gallery built with grid based blocks. Each of these block are linked with separate categories and these categories can be triggered via categories filters.

FILTERS:

Filters are organized as <li> items in the first list as shown below:

```
<!-- Portfolio Filters-->
    <div class="projects-filters">
        <!-- Filters-->
        <div id="filters">
            <nav class="primary">
                <a href="#" class="selected" data-filter="*">Everything</a>
                <a href="#" data-filter=".category1">Design</a>
                <a href="#" data-filter=".category2">Illustration</a>
                <a href="#" data-filter=".category3">Identity</a>

            </nav>
        </div>
        <!--/Filters-->
    </div>
    <!--/Portfolio Filters-->
```

Note that each filter item is having the following markup:

```
<a href="#" data-filter=".category1">Design</a>
```

Here the DATA-FILTER holds the value which is the CLASS NAME FOR A PARTICULAR CATEGORY block inside the gallery. When user clicks on this filter item, the gallery item blocks having only that class name will be show via an animation.

GALLERY / PORTFOLIO ITEM BLOCKS:

And on the second list, each <li> holds portfolio item which can be triggered via categories assigned as CLASS values as shown above. Just replace these values as you like, please keep the exact value combinations on HREF attribute of filter items also.

```
<li class="view category3">
    <div class="view">
        <a class="group1" href="project-ajax.html" title="Project Title Goes Here
        "><img title="designova" alt="reva" src="images/portfolio/1_thumb.jpg"
        />
            <div class="mask">
                <h3>Project Title</h3>
                <h6>Project Category</h6>
                <img title="designova" alt="reva" src="images/icons/more.png"/>
            </div>
        </a>
    </div>
</li>
```

For more information please refer the original preview along with demonstrations shown on plugin's source page

http://isotope.metafizzy.co/

The plugin in invoked inside:
[ROOT FOLDER]/javascripts/**script.js**

All the images contained in this module are located inside:
[ROOT FOLDER]/images/**portfolio**

GALLERY / PORTFOLIO ITEM LIGHTBOX:

Each portfolio item when clicked, displays lightbox containing a larger image or project information which can also include an image slider within the lightbox. This lightbox is implemented with ColorBox plugin. The location of files to be opened in this lightbox is given via:

```
<a class="group1" href="project-ajax.html" title="Project Title Goes
Here"><img title="designova" alt="reva" src="images/portfolio/4_thumb.jpg"
/>
```

when clicking on this link to trigger lightbox for this item. Here we have `href="project-ajax.html"` attribute which is the name of project page to be loaded into the lightbox when clilcked. This loading is performed via AJAX via jQuery.

IMPORTANT:
In order to showcase more projects please do the following:

1) Clone the file `project-ajax.html`
2) Rename it to something else
3) Now link this new file to any portfolio block (explained above) and on clicking this portfolio item the AJAX is loading the content from this newly linked file.
4) Repeat the same procedure for all project blocks / project pages.

Fore more settings on this lightbox please visit http://jacklmoore.com/colorbox

Image Slider inside Lightbox:

We have a nice image slider inside the Lightbox which act as project image slider. You can see these images in the following location:

[ROOT FOLDER]/images/projects/project1/**01.jpg**
These images are declared inside each and evey project page (AJAX feed), as shown below:
[ROOT FOLDER]/ **project-ajax.html**

```
<div class="flexslider clearfix">

    <ul class="slides">
        <li>
            <img title="designova" alt="reva" src="images/projects/project1/01.jpg" />
        </li>
        <li>
            <img title="designova" alt="reva" src="images/projects/project1/02.jpg" />
        </li>
        <li>
            <img title="designova" alt="reva" src="images/projects/project1/03.jpg" />
        </li>
    </ul>

</div>
```

This plugin is FLEX Slider which has more options which can be found here.
http://www.woothemes.com/flexslider/

5) Google Map Setup

We have integrated google map inside this theme.

How to setup your own location on the map?

Whenever you want to show a map with your own location showed up, please do the following:

1) Open the file: [ROOT FOLDER]/javascripts/**script.js**

2) Go to Line 180:
```
var latlng = new google.maps.LatLng(41.517832,-8.493118);
```

   Also go to Line 212:
```
var companyPos = new google.maps.LatLng(41.517832,-8.493118);
```

3) Now change these values to your own (**L,L**) combination.
   If you are unsure about the (L,L) values please visit this: http://universimmedia.pagesperso-orange.fr/geo/loc.htm

6) Contact Form Configuration

The template is featuring a fully working contact form with PHP mail sending ready. We have kept everything ready, you have to only provide your own email id instead of the predefined demo email id. This can be done by simply modifying the email id, as shown in the SENDCONTACT.PHP file, located in root directory.

[ROOT FOLDER]/**sendcontact.php**

Setting Up Email Credentials

Open this file via a code editor / text editor and now go to the code segment: Line 4 to 6.
Please see the screenshot:

```
3  // Define some constants
4  define( "RECIPIENT_NAME", "John Doe" ); //UPDATE THIS TO YOUR NAME
5  define( "RECIPIENT_EMAIL", "john@example.com" ); //UPDATE THIS TO YOUR EMAIL ID
6  define( "EMAIL_SUBJECT", "Website Visitor Message" ); //UPDATE THIS TO YOUR SUBJECT
```

The value "***john@example.com***" should be replaced with your own email so that the emails will be sending to this email id. The value inside 'subject' should be changed to something meaningful since this will be displayed as the subject of the email message send via the contact form. That's all for basic setup.

All PHP mail sending library files and server scripts are stored in MAIL folder in the root. For advanced users who need in-depth customizations, the PHP script can be modified appropriately. The PHP file is 'processForm.php' and it is located in the root folder.

Chapter

Fonts and Typography

Fonts Directory and Declaration

We have used CSS3 Font-Face technology to render fonts in this template. We have defined all font rules via the following CSS file:

[ROOT FOLDER]/assets/css/**typography.css**

And we have included all font resource files inside the following folder:

[ROOT FOLDER]/assets/css/**fonts**

Setting Up Font-Face Rules

An example usage of Font-Face is defined as follows:

```
@font-face {
        font-family: 'MyFontFamily';

        src: url('fonts/mywebfont.eot');
        /* IE9 Compat Modes */

        src: url('fonts/mywebfont.eot?#iefix') format('embedded-opentype'),
        /* IE6-IE8 */

                url('fonts/mywebfont.woff') format('woff'),
                /* Modern Browsers */

                url('fonts/mywebfont.ttf')  format('truetype'),
                /* Safari, Android, iOS */

                url('fonts/mywebfont.svg#svgFontName') format('svg');
                /* Legacy iOS */
        }
```

Now apply the font to any element via CSS rule targeting that element, for example if the element is #something, then we can apply the above declared font as:

```
#something {
	font-family: 'MyFontFamily', Fallback, sans-serif;
}
```

Typography Arrangements:

We have used H1 tag for Main Heading and H3 tag for Sub Headings. We have kept separate style rules for all typographical elements via a single stylesheet:

[ROOT FOLDER]/stylesheets/**style.css**

Chapter

7

Images, Icons & Graphics

Reva features many images and graphical elements. We have kept such image resources in a single folder:
[ROOT FOLDER]/ **images/**

Images featured on live preview are not included in the download pack since they are copyrighted properties of original photographers and authors. Instead we have included exact placeholder (dummy) images with same dimensions and format. Please replace them with your preferred images, don't forget to keep exact dimensions as placeholder images.

Icon Fonts

We have not included any Icon Fonts for this theme. So this will be more easy for ordinary users to replace simple images rather than setting up a new Icon Font.

Image Credits

Images on live preview are exclusive properties of original authors. Please find the theme information page (from where you bought this theme) to see image sources and credits information. If you want to use any of such images on your site you have to either purchase the original stock images or contact their authors (we are not).

Graphics / Icons Credits

We have used some Icons and created some graphics based on some icons available free over web. The sources are as follows:

http://iconmonstr.com/
http://www.tenbytwenty.com/sosa.php

Vote of Thanks

Once again, Thank You for purchasing our product.
We hope you like our theme as well as this documentation. We have done our level best to make things pretty clean and clear. Anyway if you have queries, support requests or something to know more from us, kindly contact us via email to: info@designova.net.

Support Requests - Please note:

When you send a support request email you must include the purchase code and purchase date of the product (received from Market Place website). Support request emails without this information will not be answered. This is needed to prevent pirated users and spammers from our support system.

About Us:

We are Designova, a small team of young web designers and developers and we are good people to work with ☺ We are from Kerala – the God's own country and we work on UTC +5.30, Monday to Friday during 09.30 to 16.30.

We have more premium themes, please visit our portfolio:
